EDUCATION

Point Park University | Pittsburgh, PA

Expected Graduation: *May 2025*

Bachelor of Science, Computer Science

Coursework: Databases, Introduction to Programming, Data Structures, Algorithms, Data Analytics, Advanced Programming, Network and Security, MicroComputing

SKILLS

Languages : JavaScript, Python, SQL (PostgreSQL, MySQL), HTML, CSS

Databases: PostgreSQL, MySQL, MongoDB

Frameworks: TensorFlow, Keras, ReactJS, NodeJS

Tools: Git, GitHub, Postman, Dash, VS Code, Matplotlib, NumPy

EXPERIENCE

Computer Science Tutor

Oct 2023 – Current

Point Park University, Center for Student Success

- Delivered personalized instruction on key computer science concepts, including programming languages (JavaScript, Python, etc.), data structures, and algorithms.
- Provided detailed, constructive feedback on assignments and projects, significantly improving students' coding proficiency and problem-solving skills.
- Designed and implemented customized learning plans to assist students in achieving academic excellence and boosting their confidence in the subject

PROJECTS

Image Classification using Convolutional Neural Networks (CNN)

April 2024 – May 2024

Tech Stack: *Python, TensorFlow, Keras, NumPy, Matplotlib*

- Developed a robust Convolutional Neural Network (CNN) model to classify images from the CIFAR-10 dataset into 10 distinct categories, including airplanes, cars, and animals.
- Efficiently preprocessed the dataset by normalizing pixel values and applying one-hot encoding to enhance label representation.
- Designed, built, and trained the CNN model using TensorFlow and Keras, achieving high accuracy in image classification.
- Utilized Matplotlib to visualize training and validation metrics, enabling rigorous performance monitoring and iterative model refinement.

Sunfresh Food Services Project

Jan 2023 – April 2023

Tech Stack: *JavaScript, ReactJS, NodeJS, PostgreSQL, PgAdmin, Postman*

- Spearheaded the design and development of a user-friendly web interface for inventory and order management.
- Collaborated effectively with team members throughout the project lifecycle, ensuring seamless integration and optimal functionality.
- Conducted rigorous testing of API queries using Postman, ensuring the robustness of the system.
- Utilized PgAdmin to populate database tables with accurate and relevant data, ensuring smooth database operations.
