EDUCATION

Point Park University | Pittsburgh, PA

Expected Graduation: May 2025

Bachelor of Science in Computer Science

Coursework: Databases, Introduction to Programming, Data Structures, Algorithms, Data Analytics, Advanced Programming, Network and Security, Micro Computing, Web Applications Development, Mobile App Development, Electronic Commerce

SKILLS

Languages : JavaScript, Python, PHP, SQL (PostgreSQL, MySQL), HTML, CSS

Technologies : React, Node.js, Next.js, Rest APIs, Firebase, HTTP, TCP/IP, OAuth 2.0, TensorFlow, Keras, Chart.js, NumPy

Tools: Git/ GitHub, Postman API, Dash, VS Code, Matplotlib, Visual Studio, Vercel

EXPERIENCE

Computer Science and Mathematics Tutor

Oct 2023 – Current

Point Park University, Center for Student Success

- Delivered **personalized instruction** on key **computer science concepts**, including programming languages (JavaScript, Python, etc.), **data structures**, and **algorithms**.
- Provided detailed, constructive feedback on **assignments** and projects, significantly improving students' **coding proficiency** and **problem-solving skills**.
- Designed and implemented **customized learning plans** to assist students in achieving **academic excellence** and boosting their confidence in the subject.

Software Engineering Intern

Jan 2023 – Apr 2023

Sunfresh Food Service

- Contributed to the design and development of an intuitive web interface for inventory and order management, enhancing **operational efficiency**.
- Collaborated with a team of developers to integrate **frontend** and **backend** functionalities, ensuring a smooth and efficient user experience.
- Developed and integrated **RESTful APIs**, facilitating seamless data exchange between the frontend and backend systems.
- Gained hands-on experience in **full-stack development**, collaborating with stakeholders to meet **technical** and **business needs**.

PROJECTS

Secure Authentication with Azure AD B2C

Jan 2025 – Feb 2025

Tech Stack: *React, Azure AD B2C, MSAL.js, Node.js, CSS*

- Developed and implemented a **secure authentication system** using **Azure AD B2C**, enabling users to register and sign in through Microsoft accounts while ensuring robust data security.
- Configured authentication policies and custom user flows in **Azure AD B2C**, enhancing user experience and security by supporting multiple sign-in options and seamless session management.
- Integrated **OAuth 2.0 authentication** flows with both frontend and backend, showcasing expertise in **cloud identity management** and secure **API** integration.

EventTracker: Event Management System with Chatbot and Metrics Tracking

Sep 2024 – Dec 2024

Tech Stack: *PHP, JavaScript, HTML, CSS, PostgreSQL, PDO, Chart.js*

- Developed **EventTracker**, an all-in-one event management system designed to streamline event planning and attendee engagement, featuring an **intelligent chatbot** to automate responses and provide **real-time support**.
- Integrated a comprehensive **metrics tracking system** to monitor event performance, track user interactions, and visualize key data through **Chart.js** for insightful reporting and decision-making.
- Designed a secure **user authentication** module with **session management** to ensure data privacy and controlled access for event organizers and participants.

Image Classification using Convolutional Neural Networks (CNN)

April 2024 – May 2024

Tech Stack: *Python, TensorFlow, Keras, NumPy, Matplotlib*

- Engineered a high-performance CNN model that accurately classifies images from the CIFAR-10 dataset, showcasing expertise in deep learning and computer vision
- Utilized Matplotlib to visualize training and validation metrics, enabling rigorous performance monitoring and iterative model refinement.

PROFESSIONAL AFFILIATIONS

- Member, Pittsburgh Technology Council

Aug2024–Present

- Member, ColorStack

Feb 2024–Present

- Member, Rewrite the Code

Sep 2023– Present
